

Operation Management

ITO Model by Manish Biswas – PRN 22020845010 – MBA (BA)

Organisation - Sadhu Vaswani mission's Medical Complex, Pune

The Sadhu Vaswani Mission's Medical Complex located in the lush green environs of Pune's Koregaon Park, has been a dream project of the Sadhu Vaswani Mission. The vision behind this prestigious 'Temple of Healing' has been Rev. Dada J.P. Vaswani's- where a patient would not be reduced to a mere case number but would be treated with love, respect and sympathy. It is our humble endeavour to translate this dream into reality.

The Sadhu Vaswani Mission's Medical Complex comprises of:

- Inlaks & Budhrani Hospital
- Morbai Naraindas Budhrani Cancer Institute
- Kirpalani Kundnani Eye Institute
- Fabiani & Budhrani Heart Institute
- S.V College of Nursing

Input – Patients, Doctors, Medical Facilities, Supplies, Machines.

When a person suspects that he/she is sick, he goes to the hospital counter & books for an appointment, where he/she asks for the specialist for consultancy. After that he/she pays the consultancy fee and goes to the doctor for check up

and take consultancy for further action. After that he/she goes for additional test to detect the disease. If there's an emergency case then patient is admitted or taken to the emergency room directly where treatment is started immediately to placate the condition of the patient.

There could be tests where body fluids could be taken or instruments like X-Ray/MRI could be used to detect damage within body at a lab situated within hospital.

Transformation – Surgical procedures, Health Consultancy, administering medication, Changes in the location of materials, Information or Customers, Administering Patients.

Patient decides the next action towards healing, after he/she finds out what they are suffering from. The doctor might/ might not suggest to get admitted in the hospital. If patient decides to get admitted / gets admitted in severe condition. The hospital takes further step, where they prepare a rest room where patient gets admitted and undergoes treatment. Doctors (specialist) might recommend for surgery or test. A surgeon is called to perform surgery if needed, where the body defect is repaired. After surgery, patient has to take rest until he/she is recovered from the operation, then further treatment continues on.

If patient is not required to be admitted, he/she has to come to the hospital periodically where he/she undergoes treatment and procedures for some period of time depending on the type of disease he/she's suffering from.

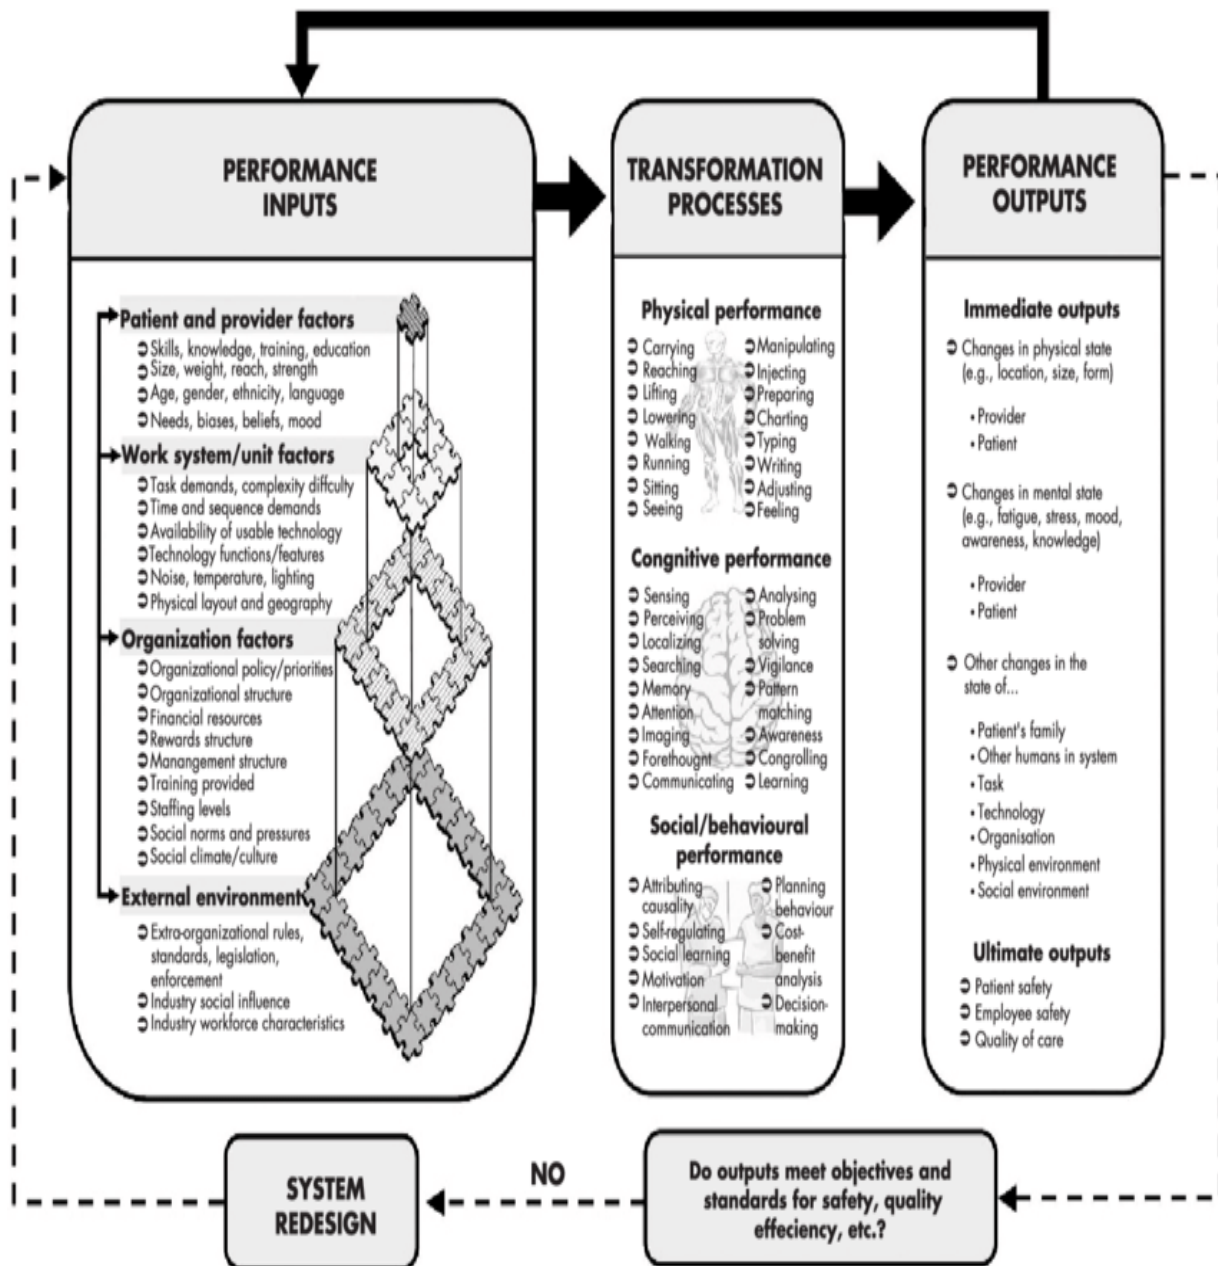

While the patient is undergoing treatment, a digital medical record of the patient is maintained where all test & diagnosis done is recorded which will be helpful in future to detect other diseases.

Other than the patient, there are employees record that is maintained digitally for the efficient working of the organization.

Output – Healthy people, Ill /dead people, medical results, Prescribed Medicines, Patient Satisfaction.

After patient is done with the treatment, he/she is discharged with full medical reports and with additional medicines.

If patient doesn't survive the treatment, he/she is sent to the crematorium through ambulance supported by the family.

Observation & Conclusion - Healthcare is a diverse industry that includes institutions and practitioners that provide services for the diagnosis, treatment, and prevention of injury, illness, disease, and other physical and mental impairments. There is a wide variety of specialties that focus on specific treatments. At Sadhu Vaswani Med Complex, patients go to different departments to cure their illnesses & also to consult doctors. It has specialists for every different disease human body suffers from. The hospital has latest technology to detect & identify different illnesses or defects in the human body. Also, hospital is capable of doing emergency treatment of patients suffering severe deteriorating condition. Hospital has an oxygen plant for 24Hr abundant regular supply, for sudden demand. It was also one of the hospitals within city

capable of handling Covid patients. It also has generator system for uninterrupted supply of electricity.

Feedback –

- Should increase more staff to handle patients.
- Increase the parking area for the hospital.
- Ambulance services should be increased.
- Should finish up the construction that is happening for 6 months, causing disturbance.
- Canteen can be much bigger & food can be much tastier.
- Ambience could be made much better.
